Abstract (en)

[origin: WO2018099969A1] The invention relates to a nozzle device (1) for dispensing a medium to be dispensed onto a component (1), preferably for dispensing the medium to be dispensed onto two lateral surfaces (101, 102) and preferably a front surface (103) of a joint, an edge or a transition seam of the component (100). The nozzle device (1) comprises an opening configuration for dispensing the medium to be dispensed and is particularly characterised in that the opening configuration comprises at least two openings (2.1, 2.2) for ejecting at least two jets (S1, S2) of the medium to be dispensed and in that the at least two openings (2.1, 2.2) are inwardly oriented such that the at least two jets (S1, S2) approach each other towards the dispensing side (A).
