Abstract (en)

[origin: WO2018100268A1] The invention concerns a lighting and/or light signalling device (100) suitable for being mounted on a motor vehicle, extending longitudinally along a longitudinal axis (XX), said lighting and/or light signalling device (100) comprising a housing (21) in which at least one light source is suitable for being mounted, first attachment means and second attachment means (20), said first and second attachment means (20) being suitable for attaching said housing (10) to the motor vehicle by screwing along a vertical axis (ZZ), the second attachment means (20) comprising an attachment body (21) projecting out of the housing (10), said attachment body (21) comprising a constricted region of the cross-section of said attachment body (21) suitable for allowing the attachment body (21) to break in the event of an impact.
