Abstract (en)

[origin: WO2018100424A1] A rigid box comprises a container (1) with a wall (2) defining an inner chamber (3) into which extends a flexible bag (4) for a liquid or viscous food to be consumed in a suitable serving temperature range, whereby the flexible bag is associated with a part (5) comprising a valve (5V). The box is provided with passages suitable for the flow of an aqueous medium within the inner chamber outside the flexible bag so as to control the temperature of the food to be consumed. The upper part (1S) of the container is associated with a cover (1C) having one or more passages (625) for an element capable of acting on a movable control device (601) associated with the valve.
