Abstract (en)

[origin: WO2018100109A1] Tuned pendular dynamic damper (1) comprising:
• a set of hangers (10) to be connected in an articulated fashion to a fixed frame (2),
• a mobile frame (20) borne by the hangers (10),
• at least one inertial mass (30) borne by the fixed frame or the mobile frame (20),
• a system for driving the inertial mass, which system is configured to convert a variation in the angle of at least one hanger with respect to the fixed frame or the mobile frame into a relative movement of the inertial mass with respect to the frame that bears it.
