Abstract (en)

[origin: WO2018099831A1] The invention relates to a vehicle comprising a cooling device (1) arranged in a compartment receiving a propulsion means (2), the cooling device comprising an air flow generating means and an air channelling means (3) arranged around said propulsion means (2) in order to form therewith at least one air flow channel having a predetermined thickness, the cooling device (1) comprising a convergent portion arranged between an air discharge opening of said air flow generating means and an inlet opening (5) of said air channelling means.
