Abstract (en)
[origin: WO2018102838A1] A securing element (1) comprises a first plate (2) with at least two pin-shaped connection elements (3), which extend from the first plate (2), and a second plate (4) with at least one recess (5), in particular two recesses for the pin-shaped connection elements (3). The at least one recess (5) is shaped such that the connection elements (3) can be introduced into the at least one recess (5), and the pin-shaped connection elements (3) have stop elements (6) which are rigidly arranged on the connection elements in particular and are effective in the longitudinal direction of the connection elements (3) and with which the two plates (4) can be brought into contact when the connection elements (3) pass through the recess (5) of the second plate (4).
