Abstract (en)
[origin: WO2018099893A1] The invention relates to a disc brake for a utility vehicle, comprising a brake caliper which covers a brake disc and which is mounted on a stationary brake carrier in an axially movable manner with respect to the brake disc by means of two guide bars (6) as part of a respective slide bearing, wherein one slide bearing is designed as a fixed bearing, and the other slide bearing is designed as a floating bearing. The guide bar (6) at least of the floating bearing is equipped with a rolling bellows (10) which circumferentially encases the guide bar (6) on the guiding bar end region facing away from the brake carrier, and the end region of the guide bar (6) is closed by a cap (12). The disc brake is designed such that the rolling bellows (10) end facing the cap (12) is held on the guide bar (6) in a formfitting manner.
