Abstract (en)
[origin: EP3550250A1] A heat exchanger (1) comprises a core (2), at least one header (3) situated at and connected to least one end of the core (2) and a housing (6) enclosing the core (2). The housing (6) is received in the at least one header (3). The at least one header (3) is provided at its bottom (32) with supporting sections (35). The supporting sections (35) are provided at the bottom (32) in positions, which correspond to positions of walls of the housing (6), which need be sealed. The housing (6) rests on the supporting sections (35) so that a gap (7) is created between the housing (6) and the bottom (32) of the at least one header (3).
