Abstract (en)  
Sign support system characterised in that it comprises at least one supporting part (1) provided with two ends (2), which include corresponding upper extensions (3) comprising an inclined housing (4) facing in a converging direction for holding the lower edges of corresponding sheets (7 and 8) of a sign (9), such that said sheets (7 and 8) are displayed in an inclined position and in a converging direction. This configuration makes it possible to display the sheets (7 and 8) stably on any type of surface, including flat, curved or any other surface, such as tables, chairs, etc. In the preferred embodiment, each housing (4) defines an outer leg (5) and an inner leg (6) inclined in a converging direction to make it easier to hold the sheets (7 and 8).
