Abstract (en)

[origin: WO2018104533A1] The invention concerns a vent structure of a pumping unit (6) for pumping effluents containing volatile organic compounds, the structure comprising a discharge pipe (1) for discharging gases contained in the effluents into the atmosphere, said pipe being provided with a first, preferably bent, end (10), intended to be connected to the pumping unit, and a second end (11) open to the atmosphere, a frame (2) for attaching the first end to the ground, an assembly forming a support (3) suitable for holding the second end of the discharge pipe vertically at a distance h, preferably greater than 3.5 metres, from the first end. The invention also concerns a pumping unit provided with such a vent structure.
