Abstract (en)

[origin: WO2018232535A1] The invention relates to a device for uninterrupted coating of can bodies with a coating fluid, comprising an input container (2) for providing the coating fluid to be applied, a compressed air source (3) for supplying compressed air, an application nozzle (9) for spraying the coating fluid onto the can body by means of an application pressure. According to the invention, an intermediate container (5) is provided, which is connected on the input side to the input container (2) and the compressed air source (3) by means of an input line (8a) and is connected to the application nozzle (9) on the output side by means of an output line (8b).
