Abstract (en)  
[origin: WO2018104098A1] The invention relates to a dust hood (100) for a grinder (200) having a gearbox neck (210) for fastening the dust hood (100) and having a hood body (10) for covering one side of a predominant part of the grinding wheel (220), wherein the dust hood (100) has a hood section (20), which is movable along the hood body (10) in the circumferential direction (U) of the hood body (10), which hood section is provided for gradual covering and exposing a remaining part of the grinding wheel (220) as required, and having an extraction connection (40) via which a substrate erosion can be extracted from the hood body (10), wherein at least one opening (13) is formed in a surface (OK) of the hood body (10) facing the grinder (200), via which the ambient air (UL) can flow into the hood body (10).
