Abstract (en)  
[origin: WO2018103860A1] The invention relates to a pressing head (100) for a device for pressing material to be pressed, in particular for pressing chips, in particular an extrusion press. The pressing head (100) comprises at least two pressing channels (1, 1'), each having an inlet opening (11, 11') and an outlet opening (12, 12'). Each pressing channel (1, 1') has a stationary supporting element (2, 2') and a movable pressing element (3, 3'). The pressing element (3, 3') is movable on one side, preferably relative to the supporting element (2, 2'). A cross-section (QA) of the pressing channel at the outlet opening of the pressing channel can be varied relative to the cross-section (QE) of the pressing channel at the inlet opening of the pressing channel.
