Abstract (en)
A multifunctional curved training structure includes a main body in an U shape, and a second main body in an U shape. A first supporting bracket is provided between a first left branch and a first right branch of the first main body. A second supporting bracket is provided between a second left branch and a second right branch of the second main body. A left elastic connecting member arched in shape includes a left spring and a left flexible sleeve enveloping the left spring. Two ends of the left elastic connecting member are respectively connected to the first left branch and the second left branch. A right elastic member arched in shape includes a right spring and a right flexible sleeve enveloping the right spring. Two ends of the right elastic connecting member are respectively connected to the first right branch and the second right branch. Thus, a user can selectively use the multifunctional curved training structure as an auxiliary tool for multiple workout types including push-ups, arm training and abdominal crunches for different workout patterns.
