Abstract (en)

[origin: WO2014056483A1] The invention relates to a method for producing a book-like value document and/or security document (1), particularly a passport booklet, with a front and a rear bookbinding or book cover (2), a plurality of data pages (3) and at least one security laminate (4) having personalization data. At least the data pages (3) and the security laminate (4) are connected to one another by means of an adhesive (5) along the gutter edges or the folding edges which are arranged stacked parallel to one another. The invention is characterised in that: before connection with the adhesive (5), a plurality of perforation holes (6) are applied at least in the region of the gutter edges or folding edges of the security laminate (4) and/or of the data pages (3); the gutter edges or folding edges of the data pages (3) and optionally of the security laminate (4) are connected to one another by means of the adhesive (5), which is designed as an elastomeric polymer (5), wherein the adhesive (5) enters through the perforation holes (6) or into same; and at the same time or subsequently the front and rear book binding or book cover (2) are connected to the gutter edges or folding edges of the security laminate (4) and of the data pages (3) in the book spine region.
