Abstract (en)

[origin: EP3552842A1] A W3 of a third belt (16c) of a belt layer (16) arranged between a carcass (14) and a tread portion (11) is 65% to 85% of a tire maximum width Wm and a W4 of a fourth belt (16d) is 55% to 75% of the tire maximum width Wm. A metal cord adopted in a metal cord-rubber composite forming each of the third belt and the fourth belt is formed such that N atoms in a surface thereof is set in a range between 2 atom% and 60 atom% of and a Cu/Zn ratio in the surface is set in a range between 1 and 4. A rubber composition that coats the metal cord includes 1 part by mass to 15 parts by mass of silica and 0 parts by mass to 1 part by mass of cobalt-containing compound based on 100 parts by mass of a rubber component.
