Abstract (en)

Overspeed detection systems for elevators are provided. The overspeed detection systems include a roller guide frame including a mounting base, a first roller supported on the mounting base, the first roller having a first roller wheel configured to engage with and rotate along a guide rail when installed in an elevator system, a first overspeed device arranged within the first roller wheel, the first overspeed device having a detectable element, and a detector defining a detection zone and arranged to detect the detectable element within the detection zone when the first roller wheel rotates at or above a threshold rotational speed.
