Abstract (en)

[origin: EP3553251A1] An assembly comprises at least one supporting structure and at least two filling elements supported by the supporting structure. The supporting structure comprises at least a first and a second elongated profile. Each profile comprising at least a first leg and a second leg. The first legs of the profiles extend in a same plane, whilst the second legs are spaced apart and extend substantially parallel to each other, wherein at least one filling element is supported by a first leg of the first elongated profile. The at least one filling element is located in a space bounded in a direction perpendicular to longitudinal sides of the second legs by the second leg of the first elongated profile and the second leg of the adjacent second elongated profile.
