Abstract (en)  
[origin: WO2018109132A1] The invention relates to eyelash jewelry (1), comprising a jewelry substrate (5) provided with a first magnetic means (7) having a first holding surface (8), and a fastening part (6) provided with a second means (9) that is counter-magnetic to the first means (7) and has a second holding surface (10). The two magnetic means (7, 9) of the jewelry substrate (5) and of the fastening part (6) are designed in such a way that by means of magnetic interaction, they clamp at least one eyelash (11) that can be placed between their mutually facing holding surfaces (8, 10, 17), in order to thus fasten the eyelash jewelry (1) to the eyelashes (3). In order to increase the reliability of the eyelash jewelry, according to the invention, the jewelry substrate (5) is provided with a flange (13) which protrudes from the first holding surface (8), thus forming a stop (14) for the fastening part (6).
