Abstract (en)

[origin: WO2018111997A2] Systems and related methods for enhancing learning by a subject are described. In an aspect, learning of an activity, a sound pattern, or a motor task is enhanced through the use of neural stimulation. In an aspect, a prompt for causing the subject to perform the activity is delivered, for example via an audio, video or other output device, in combination with neural stimuli. In an aspect, neural stimuli are delivered transcutaneously to a cranial nerve. Delivery of prompts, examples, and neural stimuli is controlled by electrical control circuitry. In an aspect, the system is implemented in connection with a personal computing device such as a smart phone or tablet computer.
