Abstract (en)

[origin: WO2018109467A1] The present invention relates to a tool (1) for the forming of a strip of material (9). The tool comprises a first forming surface (20) defining a recess (21) extending substantially in a first direction (7) and a second forming surface (30) arranged to at least partially protrude into the recess (21). The at least a portion of the first forming surface (20) is spaced apart from the second forming surface (30) in a second direction (8) substantially perpendicular to the first direction (7) such that an opening or channel (4) for receiving the strip of material (9) is defined therebetween. The opening or channel (4) extends substantially in the first direction (7) between an inlet (5) and an outlet (6), and the spacing between the first forming surface (20) and the second forming surface (30) in the second direction (8) narrows from the inlet (5) to the outlet (6). The present invention also relates to a dispenser (10) for dispensing a strip of material (9) comprising the tool (1), to a kit comprising the tool (1) and a strip of material (9) for forming, in use, by the tool (1), and to a method of bending a strip of material (9) comprising the steps of drawing a portion of a strip of material (9) through the channel or opening (4) of the tool (1) from the inlet (5) to the outlet (6), such that the strip (9) is formed by the first and/or second forming surfaces (20, 30).
