Abstract (en)  
[origin: WO2018109349A1] The invention relates to a handheld body rasor comprising a long body (10) provided with a cutting block (20) at the front and a suction block (30) at the rear, said rasor being characterised in that: the body (10) is produced in the form of a long tube comprising, close to the front end thereof, a suction mouth arranged facing a cutting blade of the cutting block (20); the suction block (30) is designed to create a depression inside the body (10) at least in a reservoir area between the cutting and suction blocks, which runs into the suction mouth; the long body (10) has at least one reduced section, at the front, for receiving the cutting block (20) on an outer surface of the long body (10).
