Abstract (en)

[origin: WO2018109323A1] The invention relates to a tyre (1) in which at least one of said tread pattern blocks (51) comprises a peripheral reinforcing element (52) arranged axially on the inside in relation to said at least one groove (71), from the outside towards the inside, and axially close to said peripheral groove, the peripheral reinforcing element (52) consisting of a rubbery mixture with a dynamic shear modulus G\* at least twice as high as the dynamic shear modulus G\* of the rubbery mixture of the rest of the blocks of the tread, the peripheral reinforcing element (52) extending radially from the radially outer surface of said bracing ply (6) towards the surface of said tread with an axial width that narrows progressively moving radially towards the outside, and in which the rubbery mixture of the rest of the blocks of the tread is present axially between said peripheral reinforcing element (52) and the axially inner adjacent side face (7i).
