Abstract (en)

[origin: WO2018108690A1] The aim of the invention is to create a sturdier design of an air vent (5) which is provided in the interior of a motor vehicle (70) and comprises an air supply duct (10), a first air vent duct (40), which branches off from the air supply duct (10) and includes a first air inlet port (50) and a first air outlet port (55), and which air vent also comprises a second air vent duct (45), which branches off from the air supply duct (10) and comprises a second air inlet port (60) and a second air outlet port (65), and an adjustment means (15) for adjustment of the quantity of air transported through the first air vent duct (40) and the second air vent duct (45). This aim is achieved, according to the invention, in that the adjustment means (15) has a round, preferably circular cross-section, on the outer face of which a first and a second segment (25, 30) are provided, which are spaced apart from one another to form an air guide duct (35), and which respectively close or at least partially open the first air inlet port (50) or the second air inlet port (60) as required.
