Abstract (en)
[origin: WO2018109386A1] The invention relates to a vehicle sliding door (1) comprising a box section (4) and a slide (3) on which guide means (10, 12, 13, 43) of said door (1) are mounted, the slide (3) having an outer surface (17) intended to come into contact with a surface of the box section (4), said slide (3) being intended to be fastened to said box section (4). The main feature of a sliding door according to the invention is that the slide (3) comprises an eccentric (24) provided with a finger (33) that protrudes from the outer surface (17) and is able to be inserted into a vertical slot (50) of the box section (4), the position of the slide (3) on the box section (4) being adjusted by the eccentric (24) being rotated relative to the slide (3), causing said slide (3) to move in horizontal translation along the box section (4) along a longitudinal axis of the vehicle.
