Abstract (en)

[origin: WO2018108634A1] The invention relates to a transport system having at least one cable-drawn or rail-bound vehicle (7), which has a transport means (14), for example a car, and a bogie (15), by means of which the vehicle (7) can be moved along a track (3). The transport means (14) is mounted on the bogie (15) so as to be movable in the vertical direction. The track (3) has at least two sections (3a to 3d) having a different slope, and a guide track extends along the track (3) and, in the sections (3a, 3b), is at a different distance from the track (3). A guide device is guided along the guide track, and the transport means (14) is connected to the guide device for level control.
