Abstract (en)

[origin: WO2018107195A1] The invention relates to a pivoting/sliding door for vehicles, comprising a door leaf (3) with a support mechanism (14), a stationary rotatable spindle (2), and a spindle nut (1) which is connected to the door leaf (3) via a connection element (6) and comprising a stationary guiding rail (4) which has a curved section for a guide element (7) fixed to the door. The invention is characterized in that a) the curved section (9) is followed by a section (10) which runs perpendicularly to the spindle axis (12), b) the connection element (6) is connected to the spindle nut (1) and to a console (15) which is fixed to the door leaf in a pivotal manner about axes (11, 13), and c) the door leaf has a closed final position upon reaching the guide element (7) of the transition point between the curved section (9) and the perpendicular section (10) in the longitudinal direction (L) but is preferably still spaced from the closed final position in an adjustment direction (E).
