Abstract (en)
[origin: WO2018108487A1] The invention relates to a transmission for a bicycle, comprising at least four shifting elements, an input shaft (1), a first planetary gear set (PS1), which is operatively connected to the input shaft (1), a second planetary gear set (PS2), which is operatively connected to the input shaft (1), and an output shaft (2). The transmission is characterized in that the input shaft (1) is connected to a ring gear of the first planetary gear set (PS1) for conjoint rotation and the output shaft (2) is connected to a planet carrier of the first planetary gear set (PS1) for conjoint rotation.
