Abstract (en)

[origin: WO2018115808A1] A container for housing an artwork during transportation or storage, the container comprising four side parts and four corner parts for connecting the side parts to form a substantially rectangular frame; a substantially rectangular lid part and a substantially rectangular mounting panel, each of the side parts having a first recess extending along its length for receiving a respective edge of the lid part and a second recess extending along its length for receiving a respective edge of the mounting panel; a first resilient member for locating around the perimeter of the lid part between the lid part and the substantially rectangular frame; a second resilient member for locating around the perimeter of the mounting panel between the mounting panel and the substantially rectangular frame so as to act as a shock absorber between the mounting panel and the substantially rectangular frame; and securing means for securing the lid part in a closed position relative to the substantially rectangular frame.
