Abstract (en)
[origin: WO2018114038A1] The present invention relates to a blind drain-semimember (18), comprising a base grid (2) and at least one pillar (1) connected to the base grid (2) and projecting approximately perpendicularly away from the base grid (2), the opposite end (3) of the pillar from the base grid (2) having a surface (4) comprising a first connecting element (8) or a second connecting element (11) and the pillar (1) having a wall (5) which delimits a cavity (9) of the column (1). The wall (5) of the column (1) is inclined uniformly over its entire length (L), along the entire extent of the column (1), in relation to a normal (10) that extends perpendicularly on the base grid (2).
