Abstract (en)
[origin: WO2018108424A1] The invention relates to a door having an emergency opening device, comprising a door leaf, which can be moved between an open and a closed position, a primary motor that drives the door leaf by way of a door leaf drive, and an auxiliary motor, which is connected to an emergency power supply and is suited to drive the door leaf. In order to improve such a door to the effect that the emergency opening device can be reliably employed in different types of failure of the main drive motor of the door in order to open the door, the auxiliary motor, according to the invention, is coupled to the door leaf by way of an auxiliary motor coupling, and the emergency power supply has an energy store.
