Abstract (en)  
[origin: WO2018108745A1] The invention relates to a lamp (1) comprising a lamp base (2), a lamp head (3), and a lamp column (2) extending between the lamp base (2) and the lamp head (3), wherein the lamp head (3) has first light sources (5), which are arranged in a common plane (E) and are designed to decouple a first, indirect light component (6), and wherein the lamp head (3) furthermore has an anti-glare arrangement (7), which is arranged parallel to the plane (E) and comprises a light deflecting film (8) and shielding elements (9), wherein the shielding elements (9) are arranged such that an angle of emission ( $\gamma$ ) of the indirect light component (6) is limited after passage through the anti-glare arrangement (7) to 30° relative to a vertical (V) to the plane (E), and wherein the anti-glare arrangement (7) has a maximum height (H) of 2.0 cm in the direction of the vertical (V).
