Abstract (en)
[origin: EP3556679A1] A paper bag (1) for receiving and containing goods. The bag (1) comprises a first wall panel (10) having two longitudinal side edges (11, 12) and a second wall panel (20) having two longitudinal side edges (21, 22). A gusset section (31, 33) connects each longitudinal side edge of the first and second panels. The first (10) and second wall panels (20) exhibit respective, mutually aligned first cuts (51, 52) which are arranged in proximity to a first longitudinal end of the first and second wall panels and configured to form a cut-out handle. At least one reinforcement patch (60) is arranged between the first (10) and second (20) panels, overlapping said first cuts (51, 52) and adhered to the first and second panels. A method and a bag converting arrangement for producing a bag (10) is also provided.
