Abstract (en)

[origin: CN110388804A] The invention relates to a device for thermal treatment of a textile web (1), in particular a dryer or a hot press. The device comprises at least one drum (5) with a perforated outer shell surface, the outer shell of which can be at least partially wound by a textile web (1), a structured drum cover (10) having a multiplicity of holes and/or patterns being able to be stretched over the outer shell of the drum (5). According to the invention, the structured drum cover (10) is designed as a width-limiting strip (11) which is wound around the drum (5) in a large number of turns.
