Abstract (en)

[origin: US2019316394A1] A device for moving a furniture part on an item of furniture, including a guide configured as an articulated lever releasably disposed on an assembly member of the device, which is assembled on the furniture part. The guide includes a securing member movably disposed on the articulated lever and capable of being positioned relative to the articulated lever. In a first position of the securing member a pivoting range of the guide is delimited by the securing member such that the guide in a closing movement is not capable of being moved from the opened position to the closed position. In a second position of the securing member the pivoting range of the guide is released such that the guide, in the closing movement from the opened position, reaches the closed position.
