Abstract (en)

A compressor (5) includes a casing (10), a motor (20), and a compression mechanism (40). The casing (10) includes a cylindrical portion (11) having an inner diameter of a first dimension (D1). The motor (20) includes a rotor (22) having an outer diameter of a second dimension (D2). The compression mechanism (40) compresses a low-pressure refrigerant to generate the high-pressure refrigerant. A ratio (D1/D2) of the first dimension (D1) to the second dimension (D2) is equal to or less than 1.8. The compression mechanism (40) includes a fixing portion (49) being in tight contact with an inner peripheral surface of the cylindrical portion (11) at a position where the compression mechanism (40) is disposed.
