Abstract (en)

The present invention relates to a process for preparing a two-layer or three-layer target for the generation of radioactive isotopes (radionuclides) by bombardment with accelerated particles; said process comprises the coupling of the layers through the passage of an electric current (pulsed, alternating or direct) and a simultaneous application of pressure. The present invention also relates to said two-layer or three-layer target comprising a first layer and a support layer with thermal conductivity or a first layer, an intermediate layer and a support layer with thermal conductivity. Said first layer comprises an element/isotope/chemical compound and has a thickness/diameter ratio  $\leq 0.25$ .
