Abstract (en)
[origin: WO2018114947A1] The invention relates to a cabinet that comprises: a cabinet body with a rear wall, a top wall and at least one base, wherein the open side of the cabinet can be closed by at least one panel which is hinged to the cabinet body, tilt fittings for said panel which are mounted on the inner sides of the lateral walls in the upper region of the cabinet body, and covered by inner walls, as well as front coverings that are arranged between the lateral walls and the inner walls of the cabinet body and can be lowered in the direction of the cabinet body rear side when the panel is in the closed position, wherein, when said panel is in the open position, the front coverings completely cover the space between the lateral walls, the inner walls, the tilt fittings and the base and lie flush with the end face of the cabinet body, the inner walls completely covering the tilt fittings and front coverings, and each of said front coverings being connected to an adjustable guiding device with a stop function.
