Abstract (en)

[origin: WO2018114182A1] The present invention relates to antiperspirant compositions. In particular, the present invention relates to anhydrous antiperspirant aerosol compositions comprising a humectant with superior ability to absorb water. Although the prior art provides for various solutions to the problem of interaction between the humectant the antiperspirant actives in anhydrous antiperspirant aerosol compositions, improved ways of addressing this problem still remains to be desired. It is therefore an object of the invention to provide a humectant which does not interact with the antiperspirant actives in an anhydrous antiperspirant aerosol composition. It has been found that stable anhydrous antiperspirant aerosol compositions wherein the humectant and the antiperspirant active does not interact can be achieved by the use of specific sugar alcohols as the humectant in specific concentrations in the composition.
