Abstract (en)

[origin: WO2018115613A1] The invention relates to a machine for sorting by densimetric bath comprising a trough, at least one draining support associated with the trough and separation means configured to be moved while being partially or entirely in the trough, characterized in that the separation means comprise at least one panel driven by a motorized means and configured to slide along the trough and on said draining support. The invention also relates to an associated sorting method.
