Abstract (en)  
[origin: WO2018116100A2] The invention relates to a sealing device (1) for a household item, in particular for a household appliance. The sealing device (1) comprises at least one sealing body (2) with several voids (3) and at least one switching means (6), which is switchable at least between a first state and a second state, wherein the voids (3) of the sealing body (2) at least in the first state are capable of allowing a fluid to flow through and in the second state have a smaller cross-sectional area that is capable of allowing a fluid to flow through than in the first state. The invention further relates to a method for manufacturing a sealing device (1) and a household item comprising at least one sealing device (1).
