Abstract (en)  
[origin: WO2018113840A1] The invention relates to a drive module for a motor vehicle, such as a passenger motor vehicle, a truck, or another utility vehicle, for coupling to an internal combustion engine, and a drive assembly for a motor vehicle comprising the drive module according to the invention. The drive module comprises an electric machine (30) with a rotor (32) for generating drive torque, a rotor support (70) which is connected in a rotationally fixed manner to the rotor (32), said rotor support being mounted so that it can rotate at least radially, and an angle resolver (300) for measuring the angular position of the rotor support (70), wherein the angle resolver (300) is mounted such that the angular position of the rotor support (70) or a component of the drive module connected essentially rotationally fixed to the rotor support (70) can be detected with respect to a component secured to the housing, such as a support wall (21). The proposed drive module combines a compact design with a functionally reliable position of an angular position transmitter.
