Abstract (en)
[origin: WO2018114626A1] The invention relates to a door sill (1) for a vehicle, comprising a step plate (2) and securing means (3, 4) for releasably securing to a carriage body (5), a labyrinth-type plate (6) being inserted between the carriage body (5) and the step plate (2) and having bores (13) for feeding through said securing means (3, 4), said bores (13) having a diameter such that the step plate (2) is able to be displaced horizontally relative to the carriage body (5), and the vertical position of the step plate (2) relative to the carriage body (5) being adjustable by inserting spacer panels (7, 7').
