Abstract (en)

[origin: WO2018122473A1] Sealed device (1) for protecting and dispensing pasty or creamy products (7), characterized in that it mainly consists of a reservoir (2) containing the product (7) and suitable for receiving, at the bottom end thereof, a longitudinally movable sealing stopper (3), said reservoir (2) is longitudinally movable like a piston in a pump body (4) and wherein it is forced into the closed position by a spring element (5) that cooperates in compression with a lateral outer projection (2e) of the reservoir (2) and with the top of the side wall (6b) of the base (6) attached to the pump body (4). The pump body (4) is formed of an elastically deformable upper membrane (4a) providing a pump function and also, on the upper lateral wall thereof (4c), of a lateral opening (4e) for dispensing the product (7). The assembled reservoir (2) and pump body (4) form means suitable for circulating the product (7) via a compression chamber supplied by at least one upper inlet orifice (2b). The device is particularly suitable for the hygiene, pharmacy and cosmetics fields.
