Abstract (en)  
[origin: WO2018113646A1] A process for the preparation of a coated detergent particle having perpendicular dimensions x, y and z, wherein x is from 1 to 2 mm, y is from 2 to 8mm, and z is from 2 to 8 mm, wherein the process comprises the following steps: (i) forming a deterative mixture comprising from 40wt% to 90wt% deterative surfactant; (ii) extruding the deterative mixture of step (i) to form an extruded material; (iii) coating the extruded material with a coating material to form a wet coated extruded material comprising from 1wt% to 40wt% water soluble inorganic salt and from 0.01wt% to 10wt% perfume, wherein the coating material is in the form of an aqueous slurry and comprises from 20wt% to 90wt% water-soluble inorganic, and from 0.1wt% to 40wt% encapsulated perfume; and (iv) removing water from the wet coated extruded material to form the coated detergent particle.
