Abstract (en)

[origin: WO2018114482A1] The invention relates, amongst other things, to a method carried out by a sensor device (10) arranged in and/or on a toilet bowl, wherein the method comprises the following: detecting (401) by means of a sensor (103) of the sensor device (10) at least one first environmental parameter in the environment of the sensor device (10), wherein the first environmental parameter is characteristic of a cleanliness of the toilet bowl; and determining and/or effecting the determination (402) of an item of control information by the sensor device (10), at least partly depending on the detected first environmental parameter.
