Abstract (en)

[origin: WO2018114145A2] The present invention relates to a fastening insert made of plastic and having a T-shaped configuration consisting of a washer insert and a hollow cylindrical shaft fastened to said washer insert. The washer insert has a plurality of eccentric through-openings, at least one of which has an edge projection running around its entire periphery or part of its periphery, said projection being in the form of teeth and extending, on one or both sides, beyond the respective fastening side of said washer insert. The teeth allow the fastening insert to be additionally interlocked with or secured in a composite material which is preferably fibre reinforced.
