Abstract (en)

[origin: WO2018114405A1] The invention relates to a door rack (6) for a domestic refrigeration appliance (1), having a basic body (7) which is designed for receiving items to be stored, and which has a rear wall (9) and a forwardly oriented upper bow (13) directed away from the rear wall (9) of the basic body (7), and has a plate (8) which is separate from the basic body (7), which plate, as the bottom of the door rack (6), is arranged in a latched manner on the basic body (7) by means of a latching device (23), and a reach-through region (16) is formed between the bow (13) and the plate (8) in the end position of the plate (8) in which it is arranged on the basic body (7). The invention also relates to a domestic refrigeration appliance (1) having a door rack (6).
