Abstract (en)
[origin: WO2018115170A1] The present invention relates to a system for processing information relating to a sample intended for laboratory analysis, said sample being handled as part of a process in which it is transferred from a client to a laboratory via a common carrier. The invention also relates to: a sample analysis process, comprising a step in which the sample is transferred from a client to a laboratory by a common carrier; and a container for receiving and preserving samples, which can be used in a system and process according to the invention. The container comprises: at least one compartment for receiving at least one sample, said compartment comprising a door, a means for locking/unlocking the door and a sample presence detector; and a data transfer device connected to a computer system for processing information relating to the samples.
