Abstract (en)

[origin: WO2019037811A1] The invention relates to a frame structure (2) as a machine frame (1) comprising a switch cabinet (4) that can be pivoted about a horizontal pivot axis (3). According to the invention, the switch cabinet (4) is to be pivotally mounted on cantilever arms (7), which protrude from a front side of the frame structure (2), such that the pivot axis (3) is located in front of the frame structure (2). In this way, a good accessibility of an internal space of the frame structure (2) is achieved from the front side, as well as an all-round accessibility of the switch cabinet (4).
